Case counts include the number of disease reports received throughout the month of July 2024 with the exclusion of COVID-19. COVID-19 case data is pulled by event date (onset date OR specimen collection date, whichever is earliest). Disease and Case Inclusion Criteria: Suspect, Probable, and Confirmed.

Key Finding Comparisons/Special Notes

- There was a significant increase in COVID cases from June (8) to July (83).
- 28% of COVID cases work or live in a long-term care facility.
- 10.9% of COVID cases were hospitalized and there was one COVID death.
- There were two new COVID (long term care facility) outbreaks reported in July.
- Salmonella and Giardiasis case counts (year-to-date) are higher than they have been in previous years.
- Hepatitis C case counts are lower than they have been in previous years.
